Hyperparameter Tuning:

- GridSearchCV
- RandomizedSearchCV

Types of Parameters

Parameters

```
graph TD; Parameters --> ModelParameters[Model Parameters]; Parameters --> Hyperparameters[Hyperparameters]
```

Model Parameters

These are the parameters of the model that can be determined by training with training data. These can be considered as internal Parameters.

- **Weights**
- **Bias**

$$Y = w * X + b$$

Hyperparameters

Hyperparameters are parameters whose values control the learning process. These are adjustable parameters used to obtain an optimal model. External Parameters.

- **Learning rate**
- **Number of Epochs**
- **n_estimators**

Hyperparameter Tuning

Hyperparameter Tuning refers to the process of choosing the optimum set of hyperparameters for a Machine Learning model. This process is also called **Hyperparameter Optimization**.

Hyperparameter Tuning Types:

GridSearchCV

RandomizedSearchCV

Support Vector Classifier:

C: [1,5,10]

kernel: ('linear', 'poly', 'rbf', 'sigmoid')
